**Full-Stack Developer** with 5.5+ years of commercial experience in React, Next.js, TypeScript and Node.js. Shipped full-stack Next.js apps with PostgreSQL and Prisma, built internal HR and CRM platforms from scratch, and led the migration of a Symfony/Twig portal to React that fully retired the legacy templates. Equally comfortable with greenfield projects and inherited codebases.

## WORK EXPERIENCE

### Full-Stack Developer, Space307

March 2022 - October 2026 (4 years 8 months)

Space307 is an international fintech company. Worked in a 5-person team on its internal products - HR and CRM systems, corporate portals and event websites - across React/Next.js frontends, Next.js backends and the legacy Symfony monolith.

- Built a full-stack Next.js CRM for internal task management: REST API routes, PostgreSQL data model with Prisma, Slack-sourced tickets, status flows and change history; designed the UI end to end and generalized it into a template adopted by 7 teams
- Shipped a full-stack Next.js app for office TV screens: Google OAuth, role-based access with an admin panel, Prisma schema and migrations, private file uploads, Slack integration and scheduled cron jobs
- Built an internal HR system from scratch covering the full hiring-to-offboarding lifecycle, used daily by the HR and recruiting team to manage 1,500+ records; cut its initial bundle by ~22% with route-based code splitting
- Led the incremental migration of the internal portal from Symfony Twig templates to React, rewriting it page by page alongside ongoing feature work
- Covered business logic and API handlers with Jest, components with React Testing Library, and key user flows with Playwright E2E tests
- Created and maintained the public-facing company landing page and 15+ internal event and campaign sites (hackathons, corporate events, charity campaigns)
- Mentored 2 junior developers through onboarding and code review; both shipped first PRs within a week

**Tech stack:** TypeScript, React, Next.js, Node.js, Prisma, PostgreSQL, REST APIs, Symfony, Zustand, TanStack Query, MobX, Tailwind CSS, SCSS, i18next, Jest, React Testing Library, Playwright

### Frontend Developer, Greenatom

April 2021 - March 2022 (1 year)

Greenatom is the IT subsidiary of Rosatom. Worked on the Employee Self-Service Portal, an internal HR system used daily by 50,000+ employees to manage documents, vacations and personal data.

- Rebuilt the company org chart with hierarchy navigation and search across 50,000+ employees
- Built real-time modules with RxJS and Redux-Observable for live updates and multi-step workflows
- Simplified vacation and business trip request forms to reduce submission errors
- Added new employee profile sections, including editable personal data and tabbed navigation

**Tech stack:** React, TypeScript, Redux, Redux-Observable, RxJS, Docker, Ant Design

## EDUCATION

### Baltic State Technical University, Saint-Petersburg — Sep 2015 - Feb 2021

Specialist Degree in Radioelectronic Systems and Complexes

## SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3
- **Frontend:** React, Next.js, Redux, Zustand, MobX, TanStack Query, RxJS, Astro, Tailwind CSS, SCSS
- **Backend:** Node.js, Next.js API routes, REST APIs, Prisma, PostgreSQL, Symfony, OAuth 2.0, role-based access control, cron jobs
- **Tools & Testing:** Vite, Webpack, Git, Docker, Jest, React Testing Library, Playwright
- **Language Skills:** English - fluent, Russian - native, Spanish - A1, Serbian - A2
