sergeiusachev.dev • linkedin.com/in/sergeiusachev • github.com/iamlykke

Frontend Developer with 5.5+ years of commercial experience in React and TypeScript, including 2+ years with Next.js. Built internal HR and CRM platforms from scratch and led a Symfony-to-React migration that fully retired the legacy stack. Equally comfortable with greenfield projects and inherited codebases.

WORK EXPERIENCE

Frontend Developer, Space307

March 2022 - October 2026 (4 years 8 months)

Space307 is an international fintech company. Developed its internal product ecosystem: corporate portals, event websites, and HR and CRM systems used by teams across the company.

- Built an internal HR system from scratch covering the full hiring-to-offboarding lifecycle, used daily by the HR and recruiting team to manage 1,500+ records
- Reduced its initial bundle size by ~22% through route-based code splitting
- Led the incremental migration of the internal portal from a Symfony monolith to React, rewriting it page by page alongside ongoing feature work until the legacy stack was fully retired
- Built a Next.js CRM for internal task management with Slack-sourced tickets, status flows and change history, designing the UI end to end; later generalized it into a reusable template adopted by 7 teams
- Shipped a Next.js app for displaying slides on office TV screens, with Slack integration, scheduled cron jobs and an internal admin panel
- Created and maintained the public-facing company landing page and 15+ internal event and campaign sites (hackathons, corporate events, sport marathons, charity campaigns)
- Covered business logic and components with Jest and RTL, and key user flows with Playwright
- Mentored 2 junior developers through onboarding and code review

Tech stack: React, Next.js, TypeScript, JavaScript, Zustand, TanStack Query, MobX, SCSS, CSS Modules, Tailwind CSS, i18next, Jest + React Testing Library, Playwright

Frontend Developer, Greenatom

April 2021 - March 2022 (1 year)

Greenatom is the IT subsidiary of Rosatom. Worked on the Employee Self-Service Portal, an internal HR system used daily by 50,000+ employees to manage documents, vacations and personal data.

- Rebuilt the company org chart with hierarchy navigation and search across 50,000+ employees
- Built real-time modules with RxJS and Redux-Observable for live updates and multi-step workflows
- Simplified vacation and business trip request forms to reduce submission errors
- Added new employee profile sections, including editable personal data and tabbed navigation

Tech stack: React, TypeScript, Redux, Redux-Observable, RxJS, Docker, Ant Design

EDUCATION

Baltic State Technical University, Saint-Petersburg — Sep 2015 - Feb 2021

Specialist Degree in Radioelectronic Systems and Complexes

SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- **Frameworks & State:** React, Next.js, Redux, Zustand, MobX, TanStack Query, RxJS, Redux-Observable
- **Styling & Testing:** SCSS, Tailwind CSS, CSS Modules, Jest, React Testing Library, Playwright
- **Tools & Practices:** Vite, Webpack, Git, Docker, Feature-Sliced Design, i18n, REST APIs
- **Language Skills:** English – fluent, Russian – native, Spanish – A1, Serbian – A2
